

Professional - SoleJet

Shoe cleaning machine polishes footwear soles and rims. It is a solid classic and elegant-looking foot-wear cleaning device. Due to its features it is indispensable in every clean zone. Big convenient grip assures stable and comfortable position during the shoe cleaning process. The drive in the lockable body is separated from the cleaning area with the sealer. Durable nylon brush can be used for cleaning even dirtiest shoe soles from the dust dirt and snow. The user puts each foot in shoe separately in designated for cleaning platform. Stainless steel platform is located above the horizontal brush. The drive is started and stopped by pushing the green button. The shoe cleaning is done dry without the use of any solutions. In the bottom part of the device there is a drawer for the shoe dirt. It has to be emptied on a regular basis. The dirty brush can be easily dis-mantled and washed in water with detergents
