

Aquarius Duo

Shoe cleaning machine is fully made of stainless steel. Its compact size fits small and large passages and, however, cannot be avoided due to its length. It is designed for wet cleaning of boot soles and sides without the need of taking the boots off. It is equipped in two horizontal brushes for shoe sole cleaning. The user starts the device with a: F - fotosensor or M - manual.

Automatically dispensed water with cleaning solution removes impurities and rotating nylon brushes collect the dirt from the boot sole. The dirt flows to the sewerage through a 50mm diameter outlet located on the underside of the shoe cleaning machine. Many users keep a second set of brushes on hand to minimize the downtime while cleaning the brushes. Due to its features it is indispensable in every clean zone. This industry sole cleaner working as a lock should be used as a forced pathway which all users have to pass.

Dimensions: 170 x 80 x 130 cm

Brushes: 2 white rotary brushes – medium / 17 x 65 cm (diameter x length)
