

Aquarius

Shoe cleaning machine is fully made of stainless steel. It is designed for wet cleaning of boot soles and sides without the need of taking the boots off. It is equipped in one horizontal brush for shoe sole cleaning and an additional brush allowing for manual cleaning of sides and top of boots. The user puts one foot in a boot on a designated for cleaning grill located over the horizontal brush and turns on the device with a switch on the arm. Automatically dispensed water with cleaning solution removes impurities and rotating nylon brush collects the dirt from the boot sole. The dirt flows to the sewerage through a 50mm diameter outlet located on the underside of the shoe cleaning machine. Cleaning takes as long as the user presses the switch on the arm.

Version „dry” Cleaning is done „dry” without the use of any cleaning solutions. At the bottom of the device there is a drawer made of stainless steel for dirt removed from the shoe soles. It requires periodic emptying.
